

ORACLE

Observation of ResiduAl Cancer with Liquid biopsy Evaluation

WHEN IT COMES TO CANCER, EVERY MOMENT MATTERS.

ORACLE is an observational study to find out if a blood test can predict cancer recurrence. Participation in this study will not impact your treatment plan.

**Most cancer deaths
are caused by
metastases.**

WITH CURRENT TESTING METHODS, RECURRENCE IS CAUGHT TOO LATE.

Current methods of monitoring recurrence, such as image-based tests, fail to detect small collections of residual cancer cells and often do not detect metastases early enough to be curable. We are blazing a trail to change this.

If you are interested in participating, please contact your doctor for further information.

YOUR PARTICIPATION COULD HELP SHAPE THE FUTURE OF CANCER CARE.

Up to 30 samples of blood will be drawn over 5 years. Your provider will work with you to ensure the timing of your blood tests coincides with regular follow-up visits.

YOU MAY BE ELIGIBLE IF YOU HAVE ONE OF THE FOLLOWING:

- Bladder, ureter, or renal pelvis cancer
- Non-small cell lung cancer
- Breast cancer
- Melanoma
- Esophageal or gastroesophageal junction cancer
- Gastric cancer
- Pancreatic cancer
- Head & neck cancer
- Ovarian or Fallopian tube cancer
- Endometrial cancer
- Renal cell cancer
- Rectal cancer

**Join us on a mission to
save lives by early
detection of recurrence.**
